DETAILED ACTION

Response to Amendment

1. In response to the Amendment received on March 11, 2008, the examiner has carefully considered the amendments. The examiner acknowledges the cancellation of claim 30.

Response to Arguments

2. Applicant's arguments, see Remarks/Amendment, filed March 11, 2008, with respect to claims 1-, 11-12, and 16-30 have been fully considered and are persuasive. The rejection of claims 1-2, 11-12 and 17-29 under 35 USC 103(a) as being unpatentable over Takabayashi et al (7,244,472 and 7,084,184) in view of Mantell et al (EP 0 779 346 and US 5,641,346) has been withdrawn. Applicant's amendment to the claims, positively requiring that the oxetane compound content in the solvent as found in the instant claims be in an amount from 10 to 40 parts by weight distinguishes the instantly claimed invention over the cited prior art of record. Takabayashi et al sets forth similar inks, however Takabayashi et al requires the oxetane content in said inks be found in amounts from 60 to 95% by weight of the total ink composition.

Election/Restrictions

3. This application is in condition for allowance except for the presence of claims 3-10 directed to inkjet recording apparatus, the non-elected without traverse. Accordingly, claims 3-10 been cancelled—see below.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Please cancel claims 3-10 without prejudice.

Allowable Subject Matter

- 5. Claims 1-2, 11-12, and 17-29 are allowed.
- 6. The following is an examiner's statement of reasons for allowance: The prior art, alone or in combination, fails to teach an ink composition comprising a polymerizable solvent positively comprising an oxetane compound in amounts from 10 to 40 parts by weight based on the entire amount of solvent and a reaction liquid the can generate an acid upon irradiation with light that is prepared separately from the ink composition and mixed with said ink immediately prior to introduction into a printer recording head. Nor does the prior art teach said ink composition having the instantly claimed viscosities. Takabayashi et al teaches similar inks, however the inks of Takabayashi et al comprising oxetane compounds in amounts from 60 to 95% by weight, which is outside the instantly claimed range. Additionally, Takabayashi et al does not positively teach separately preparing a reaction liquid comprising an acid generating compound upon light and not mixing such component until immediately prior to being introduced into a printing head.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
